ABSTRACT

This publication is intended to provide consumers with essential information about the availability of supplies of domestic and imported fruits and vegetables in Canada. It indicates when a horticultural commodity is usually in good or poor supply and whether the majority of the supplies are domestic or foreign. The guide answers questions such as "Are apples available in all months?" (yes) and "Can I buy strawberries in January (yes) or avocadoes in March?" (yes). The probable availability of supply of most fruits and vegetables can quickly be ascertained. Another handy feature is the consumer chart at the front of the booklet indicating when domestic fruits and vegetables are available. An additional improvement has been the monthly distribution tables starting on page 13. The total monthly availability has been revised to reflect the total monthly availability to total annual availability. The basis for this guide is the 1980-84 average of rail, truck, and boat unloads for fresh consumption onto 12 markets across Canada.

FOREWORD

This guide provides a series of graphs and tables showing availability of fresh fruits and vegetables as a percentage of total annual supply from domestic and imported sources for 1980-84. Actual supplies will vary according to location, weather, and other cultural and marketing conditions. The information was compiled from the annual unload reports on 12 Canadian markets published by the Horticulture Unit, Markets Information Services, Marketing and Economics Branch.

This project was supervised by N.L. Longmuir, a senior market economist with the Horticulture and Special Crops Unit. Appreciation is extended to J. Hampton, Manager, Statistical Analysis Group, and her staff. In particular, J.B.R. Daviault for his contribution to the preparation of this handbook and D.M. Orchard for the graphs and tables.

FRESH FRUITS AND VEGETABLES: WHAT'S AVAILABLE, AND WHEN

Purpose of the Guide

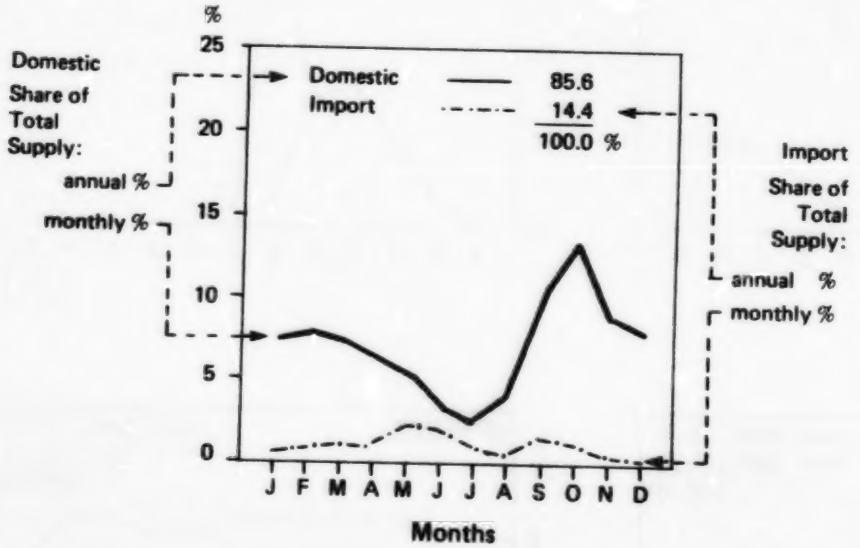
This guide shows the type and relative supply of fresh fruits and vegetables available in Canada each month, how the supplies are divided between domestic and imported products, and the estimated supplies by weight.

It can be helpful in several ways. It can be used to determine when a commodity is usually in good or poor supply, to indicate when a combination of commodities are in best supply, and to find out when supplies of domestic or imported produce are available.

The guide will answer such questions as the following: "Are apples available in all months?" (yes); "When do blueberries come on the market?" (July); "When are most carrots available?" (November); and "Can I buy strawberries in January (yes) or avocadoes in March?" (yes). The probable relative supply of most fruits and vegetables can be quickly evaluated.

How the Guide Works

On the following pages is a series of graphs (one of each fruit and vegetable) showing 1980-84 monthly average availability as a percentage of total annual unloads from domestic and imported sources.



The market volume in tonnes for each commodity is listed on pages 21 to 39. The figures are also broken down according to domestic and import volumes and the mode of transportation (truck or rail). Actual supplies will vary according to location, weather, and other cultural and marketing conditions.

The guide is based on the 1980-84 average of the rail, truck, and boat unloads for fresh consumption onto 12 markets across Canada.
